IMAGE AND VISION COMPUTING

Index to Volume 5
Numbers 1–4
Pages 1–312

1987

Subject index

(N) *denotes a news item*

Algorithms
— context-directed segmentation algorithm for handwritten numeral strings 3
— design specification for interpreting segmented image data using schemas and support logic 206
— dilation algorithm for a linear quadtree 11
— edge detection algorithm and its video-rate implementation 155
— for converting a forest of quadtrees to a binary array 297
Area parameter processor (N) 48
Array processor (N) 49
Associative memory
— for use in scene analysis 251

Binary arrays
— algorithm for converting a forest of quadtrees to a binary array 297
Binary images
— measures of correspondence between binary patterns 287
Biomedical image processing
— use of models in studying macrophage cell images and the underlying biological processes 139
Boundary detection
— stochastic model for 61

Camera calibration
— transformation calibration of a camera mounted on a robot 261
Computer angiography
— image understanding systems for carotid angiograms 79
Computer vision
— geometric reasoning for computer vision 233
Control applications (N) 243
Correspondence
— measures of correspondence between binary patterns 287

Edge detection
— algorithm and its video-rate implementation 155
— design of optimal Gaussian operators in small neighbourhoods 199
— improved localization in a generalized Hough scheme for the detection of straight edges 279
— practical first-difference edge detection with subpixel accuracy 217
Engineering vision systems (N) 50

Gaussian operators
— design of optimal Gaussian operators in small neighbourhoods 199
Geographic information systems
— recent developments in linear quadtree-based geographic information systems 187
Geometric reasoning
— for computer vision 233
Graphics controller boards (N) 246

Handwritten numerals
— context-directed segmentation algorithms for handwritten numerical strings 3
Hierarchical data structures
— dilation algorithm for a linear quadtree 11
Hough transforms
— improved localization in a generalized Hough scheme for the detection of straight edges 279
— of data from a planar array of image sensors 121

Image analysis
— stochastic model for boundary detection 61
Image analysis system (N) 245
Image buffer card (N) 51
Image compressor (N) 303
Image matching
— 'four-line' method of locally estimating optic flow 67
— matching geometrical descriptions in three-space 73
Image processing algorithms (N) 243, 244
Image processing boards (N) 51, 305
Image processing ICs (N) 307
Image processing systems (N) 51, 246, 247, 304, 306, 307
Image reconstruction
— tomographic image reconstruction based on a backscattering coherent processing technique 29
Image transform coding
— linear predictive coding of monochrome images 267
Image transform
— the Radon transform and its application to shape parametrization in machine vision 161
Image trees
— triangular decomposition 225
Image understanding
— systems for carotid angiograms 79

Knowledge-based systems
— algorithm design specification for interpreting segmented image data using schemas and support logic 206
— image understanding system for carotid angiograms 79
— knowledge source for describing stereoscopically viewed textured surfaces 105

Image reconstruction
— tomographic image reconstruction based on a backscattering coherent processing technique 29
Image transform coding
— linear predictive coding of monochrome images 267
Image transform
— the Radon transform and its application to shape parametrization in machine vision 161
Image trees
— triangular decomposition 225
Image understanding
— systems for carotid angiograms 79

Knowledge-based systems
— algorithm design specification for interpreting segmented image data using schemas and support logic 206
— image understanding system for carotid angiograms 79
— knowledge source for describing stereoscopically viewed textured surfaces 105

— matching segmented scenes to models using pairwise relationships between features 114
— segmentation of sonar data 127

Line-scan camera (N) 305

Machine recognition
— context-directed segmentation algorithm for handwritten numeral strings 3
Machine vision
— the Radon transform and its application to shape parametrization in machine vision 161
Machine vision systems (N) 50, 306
Market forecasts
— electro-optics (N) 52
— machine vision (N) 302
Microcomputer vision interface (N) 48
Microscope image enhancement (N) 305
Model-based vision
— recognition using 3D structure from motion modelling 85
Modelling
— a suggestive modelling system for object recognition 98
— use of models in studying macrophage cell images and the underlying biological processes 139
Model matching
— matching segmented scene to models using pairwise relationships between features 114
Motion
— apparent area of a rigid moving body 111
— estimation of stereo and motion parameters using a variational principle 181
— 'four-line' method of locally estimating optical flow 67

Object recognition
— a suggestive modelling system for 98
— Dupin's cyclide and the cyclide patch 167
— two-dimensional object recognition using partial contours 21
Object recognition system (N) 243
Optic flow
— apparent area of a rigid moving body 111
— estimation of stereo and motion parameters using a variational principle 181
— 'four-line' method of locally estimating optic flow 67

Parallel image processor (N) 52
Pattern recognition
— contextual decision rule for region analysis 145
— distributed associative memory for use in scene analysis 251
PC-based image processing software (N) 49
Protein cell imaging (N) 53

Quadtrees
— algorithm for converting a forest of quadtrees to a binary array 297
— dilation algorithm for a linear quadtree 11
— recent developments in linear quadtree-based geographic information systems 187

Region analysis
— contextual decision rule for 145
Robot motion analysis (N) 48
Robot vision
— Hough transform analysis of data from a planar array of image sensors 121
— transformation calibration of a camera mounted on a robot 261
— two-dimensional object recognition using partial contours 21

Scene analysis
— distributed associative memory for use in 251
Segmentation
— algorithm design specification for interpreting segmented image data using schemas and support logic 206
— and description of binocularly viewed contours 132
— context-directed segmentation algorithm for handwritten numeral strings 3
— knowledge-based segmentation of sonar data 127
Sensor arrays
— Hough transform analysis of data from a planar array of image sensors 121
Sensors
— optimal combination of multiple sensors including stereo vision 174
Shape descriptors
— two-dimensional object recognition using partial contours 21
Shape recognition
— Dupin's cyclide and the cyclide patch 167
— model-based recognition using 3D structure from motion 85
Sonar
— knowledge-based segmentation of sonar data 127
Standalone image analyser (N) 245
Stereo imaging
— matching geometrical descriptions in three-space 73
Stereo vision
— estimation of stereo and motion parameters using a variational principle 181
— optimal combination of multiple sensors including stereo vision 174
Surface fitting
— terrain modelling with B-spline-type surfaces defined on curved knot lines 37
Surface texture analysis
— knowledge source for describing stereoscopically viewed textured surfaces 105
Surface modelling
— Dupin's cyclide and the cyclide patch 167
— on the classification of views of piecewise smooth objects 91

Terrain modelling
— with B-spline-type surfaces defined on curved knot lines 37
Tomography
— tomographic image reconstruction based on a backscattering coherent processing technique 29
Transputer image workstation (N) 307
Triangular decomposition 225

Video images
— edge detection algorithm and its video-rate implementation 155
— linear predictive transform coding of monochrome images 267
Video interface (N) 51
Vision software interface (N) 246
Visual thresholds
— practical first-difference edge detection with subpixel accuracy 217
VME image processing boards (N) 305
